April, 2009

AWARD START DATE  
July 1, 2009

# Pilot and Exploratory Project Support Grant

2008

Request for Applications

## PILOT AND EXPLORATORY PROJECT SUPPORT GRANT

### Program Description

The development of the specialty of palliative care has been a critical step in addressing the unmet needs of patients with serious illness and their families and the growth of this field has been remarkable. Nevertheless, the field faces sizeable challenges if care for seriously ill patients and their families is to improve. Unlike other areas of health care, the knowledge base to support the basic elements of palliative care clinical practice (i.e., pain and symptom management, communication skills, care coordination) is small and inadequate and systems of care that have been developed to support the needs of patients and families have yet to be evaluated. Over the past eight years, a series of reports from the Institute of Medicine, the National Institutes of Health, and the American Academy of Hospice and Palliative Medicine have called for substantial investment in palliative care research to address these knowledge gaps. But despite billions of dollars spent on research in chronic diseases such as cardiovascular disease, chronic obstructive pulmonary disease (COPD), Alzheimer's and related dementias, and cancer, there has been almost no investment in research that might significantly alleviate the physical symptoms; psychological distress; and personal care, family, and social needs of older persons living with advanced illness. In an effort to support investigators conducting patient-oriented research in palliative care who wish to maximize their chances of obtaining larger extramural funding, the National Palliative Care Research Center (NPCRC) is awarding pilot/exploratory research grants. This Program is currently requesting electronic applications for its 2009-2010 funding cycle.

The National Palliative Care Research Center was established in July 2005 with a grant from the Emily Davie and Joseph S. Kornfeld Foundation. The Center was developed in response to a shortage of palliative care funding structures; a shortage of palliative care investigators; and a need for an organizational home for palliative care research in the United States. The primary goal of the NPCRC is to improve care for patients with serious illness and their caregivers by promoting palliative care research and rapidly translating these research findings into clinical practice.

The Pilot/Exploratory Project Support Grant provides funding for investigators performing pilot/exploratory research studies. Investigators must conduct research projects whose purpose is to test interventions, develop research methodologies, or explore novel areas of research that are directly related to the Center's core mission and stated areas of interest. A condition of funding is a clearly defined plan as to how the investigator will use the results of the project to develop larger, extramurally funded research projects.

This request for applications (RFA) is limited to applications that focus on palliative care research projects for seriously ill patients and their families in three specific areas:

1. *Exploring the relationship of pain and other distressing symptoms to quality and quantity of life, independence, function, and disability and developing interventions directed at their treatment in patients with advanced and chronic illnesses;*
2. *Studying methods of improving communication between adults living with serious illness, their families and their health care providers;*
3. *Evaluating models and systems of care for patients living with advanced illness and their families.*

Program Description

*continued*

Awards may be one to two years in duration and for as much as \$70,000 per year (direct costs), plus 10% allowable indirect costs. Awards are not renewable.

**Award Information**

To be eligible for a pilot/exploratory project grant under the NPCRC Program, applicants must meet the following requirements:

1. *Applicants must hold a doctorate degree (M.D., Ph.D., or equivalent);*
2. *Applicants must have a full-time faculty position or equivalent at a college, university, medical or nursing school, or other fiscally responsible organization within the United States by the time of the award start date;*
3. *Applicants must be citizens or permanent residents of the United States;*
4. *Applicants should have a MINIMUM of five years postdoctoral research experience, although promising junior investigators—as identified by a statement from their research mentor—will be considered;*
5. *Preference will be given to applicants that meet at least one of the following conditions:*
  - a. *Have an established track record as a mentor; OR*
  - b. *Have a history of successful peer reviewed research funding.*

**Eligibility**

Applicants uncertain about their eligibility are strongly advised to contact the NPCRC before preparing an application.

Each recipient of a NPCRC grant, as a condition of accepting the award, will agree to the following:

- *To attend the NPCRC Annual Retreat and Research Symposium meeting in a location to be determined each year;*
- *To present results of the funded research at the required annual NPCRC meeting;*
- *To prepare annual progress reports for each year of funding and a final report at the conclusion of the award period;*
- *To acknowledge NPCRC funding in presentations and publications.*

## Grantee Requirements

Online application forms and complete instructions for the NPCRC Pilot and Exploratory Project Support Grant are available on the Center's website at <http://www.npcrc.org>. Applications must be submitted electronically via NPCRC's online application system by the close of business (5:00 PM EST) on the specified deadline date. If the deadline falls on a weekend or holiday, applications will be accepted the following business day.

### *The NPCRC has a two-step application process:*

- STEP 1:** Eligible candidates are required to first submit online a letter of intent (LOI) along with their biosketch using the NIH 4-page format, no later than November 1, 2008, 5:00 PM EST. The LOI should not exceed 600 words and should briefly describe the applicant's research plan, time period for which funds are being requested, budget, and resources.
- STEP 2:** *Full proposals are by invitation only.* If an applicant is selected for further consideration by NPCRC, then he/she will be asked to submit a full proposal online no later than January 15, 2009, 5:00 PM EST. Only applicants who are requested to submit full proposals will have access to the complete NPCRC online application system.

## How to Apply

Full proposals must include all of the items and sections outlined below. Items are either entered directly through the NPCRC website or uploaded in a PDF file and attached to the online application. The Application Data Sheet and the Applicant's Biosketch are submitted during Step 1 of the application process, while the remaining documents are submitted in Step 2.

## Proposal Preparation

1. **Application Data Sheet** | Provide information on the applicant, project, and sponsoring institution using the NPCRC online form.
2. **Project Abstract** | Submit a concise statement of no more than 300 words describing the proposed project.
3. **Research Plan** | This portion of the application must be converted into a PDF file and then uploaded and attached to the online application. The research plan should not exceed 15 pages, should follow the NIH font and format specifications (i.e., font size of 11 points or larger; single-spaced; no more than 15 characters per inch; no more than 6 lines per inch, and at least one-half inch margins for all pages), and should include a page number and the applicant's name on each page.

The following sections must be included:

- a. Specific Aims;
- b. Background and Significance;
- c. Investigator Qualifications;
- d. Preliminary Studies (if applicable);
- e. Research Design and Methods;
- f. Future Directions (i.e., applicant's plans for how the pilot data will be used).

Note: Any appendix items should go at the end of the Research Plan section. Appendix items are not included in the page limit, but should be kept to a minimum.

4. **Budget** | Applicants should follow the online directions on how to submit the budget for their proposed project. Project expenses should be in accordance with the NPCRC budget guidelines and justified, if necessary.
5. **Biosketch** | Upload a PDF of the applicant's biosketch in the NIH 4-page format.
6. **Letter of Institutional Commitment** | Include a letter from an appropriate institutional representative showing institutional support for the investigator and his/her proposed project.
7. **Letters of Support** | For applicants with less than 5 years of postdoctoral research experience, 3 letters assessing the applicant's scientific ability and potential must be submitted with the application.

No supplemental materials will be accepted after the deadline unless requested by staff for administrative purposes or when needed for the reviewers. If an applicant has difficulty converting documents into PDF files and/or uploading them online, then please contact the NPCRC well in advance of the submission deadline.

The NPCRC Scientific Review Committee (SRC) will review proposals. The SRC is composed of internationally prominent scientists with expertise in palliative care, patient-oriented research, health services research, communication, research design, epidemiology and biostatistics.

**Peer Review  
of Applications**

Applications will be scored and reviewed using the following review criteria:

**Award Criteria**

**1. Significance**

- *Does the study address an important problem?*
- *If the aims of the application are achieved, how will scientific knowledge or clinical practice be advanced?*

**2. Approach**

- *Are the conceptual or clinical framework, design, methods, and analyses adequately developed, well integrated, well reasoned, and appropriate to the aims of the project?*
- *Does the applicant acknowledge potential problem areas and consider alternative tactics?*

**3. Innovation**

- *Is the project original and innovative? For example: Does the project challenge existing paradigms or clinical practice; address an innovative hypothesis or critical barrier to progress in the field?*
- *Does the project develop or employ novel concepts, approaches, methodologies, tools, or technologies for this area?*

**4. Investigator**

- *Is the investigator appropriately trained and well suited to carry out this work?*
- *Is the work proposed appropriate to the experience level of the principal investigator?*

**5. Environment**

- *Does the scientific environment in which the work will be done contribute to the probability of success?*
- *Is there evidence of institutional support?*

**6. Future Directions**

- *Does the investigator have clear plans for how the pilot data will be used for future projects?*
- *Is there a high probability that the resulting work will receive funding?*

Application scores, comments, and funding recommendations will be forwarded to the NPCRC Scientific Advisory Council who will make the final decision regarding funding and allocation of resources.

---

Applications that are not funded may be revised and resubmitted for the next NPCRC funding cycle. However, *only two resubmissions* are allowed. Resubmitted applications will be reviewed in the same detail and will compete on an equal basis with all other new applications. Please see online instructions on how to reapply.

---
